[Experience](#) – 10+ years

Staff Frontend Engineer at Julius Baer, Singapore | from June 2026 – Present

- Implemented Module Federation with Vite to enable feature reuse across other teams and business units.
- Documenting reusable components in Storybook so developers can reuse quickly and Playwright for end-2-end testing.

Lead Engineer at Zuellig Pharma Holdings Pte. Ltd, Singapore | from January 2023 – April 2026

- Led a team of 7+ engineers to deliver scalable web apps for healthcare clients using React, Next.js, Angular, Node.js and JavaScript/TypeScript.
- Improved page load speed and reduced network requests by configuring correct cache headers, optimizing rendering strategies and blocking resources, and leveraging React Query for efficient data caching.
- Introduced PGMQ to decouple backend services written using Node.js and enhance system resilience under high concurrency, and implemented Redis caching to reduce backend load and improve response times for frequently accessed data.
- Implemented a worker-thread pool in Node.js to isolate CPU-bound tasks where necessary.

Associate Lead Engineer - Frontend at Axiata Digital Labs, Sri Lanka | from June 2019 - December 2022

- Implemented Fintech solutions for banks and financial institutions to ensure consistent functionality across major browsers identifying browser-specific inconsistencies.
- Automated testing using Jasmine & Cypress and built CI/CD pipelines using Gitlab CI/CD to deliver bug-free features.
- Mentored junior developers, conducted regular code reviews, and introduced best practices that improved team productivity.
- Some key projects I worked on in ADL are [Axonect](#) and Genie, which are SaaS products.

Senior Frontend Engineer at CodeGen International, Sri Lanka | from February 2017 - June 2019

- Designed and developed the core product [TravelBox](#) using Angular, TypeScript.
- Collaborated with leading travel companies in the US, Europe, and Australia such as Flight Center in Australia, Disney World in Florida, Royal Caribbean Cruise, Virgin Holidays, City Cruise and Kenyan Airways.

Associate UI Engineer at Virtusa (Pvt) Ltd, Sri Lanka | from December 2015 - February 2017

- Improved UX and performance across key products using Vanilla JS, Angular, HTML, and SCSS, contributing to faster load times and enhanced usability.
- Supported presales and delivered solutions for clients including British Telecom, [Frimi](#), MDA UK, and Siemens Energy SFDC, leading to faster client onboarding and increased engagement.

[Education](#)

BSc. In Science – Computer Science, Mathematics, Physics | University of Sri Jayewardenepura

BSc. In Management Information Systems | University College of Dublin, Ireland

[Skills](#)

Frontend Development

React, Next.js, Angular, JavaScript/TypeScript, Webpack, Babel, Redux (React Redux, NgRx), Storybook, Nx, React Query, HTML5, CSS/SCSS, Playwright, Micro-frontend, Figma, Sitecore

Backend Development & Databases

Node.JS (Backend for Frontend/BFF), REST APIs, GraphQL, Postgres, MongoDB, Redis

Some Projects...

Client Portal - <https://clientportal.zuelligpharma.com/>

Client Portal is a self-serve portal for our clients to engage and manage their activities with Zuellig Pharma. The platform integrates several sub modules making it easier for clients to access them.

Key contributions in the Project:

- Led the team to implement server-side rendering (SSR) where appropriate for improved performance and SEO.
- Migrated the application from Azure to Google Cloud Platform to reduce the infrastructure costs.
- Initiated to develop a scalable UI component library for reusing UI components across multiple projects.
- Took initiatives to introduce Playwright to write end-to-end tests and Mixpanel to track user interactions.
- Planned technical designs, sprint plannings and task estimations.
- Integrated multi-language support into the project to enhance user experience and accessibility across diverse audiences.

Tools and technologies: Next.js, React, TypeScript, JavaScript, GraphQL, Postgres, Redux, Docker, Azure DevOps, GCP

Analytics Portal

A web application designed to provide medical sales agents and representatives with advanced analytics and actionable insights, empowering them to make informed decisions and optimize their sales strategies effectively.

Key contributions in the Project:

- Enhanced portal for managing Looker, Tableau, and Power BI dashboards using React.
- Developed and integrated REST and GraphQL APIs for efficient data fetching and interaction.
- Improved application security by implementing security headers and robust authentication mechanisms.
- Alongside frontend tasks, improved backend performance by caching frequently accessed data with Redis and indexing PostgreSQL queries to reduce the load on database and implementing microservices.
- Migrated the application from Azure to Google Cloud Platform, reducing infrastructure costs and enhancing workload scalability.
- Improved application security by mitigating XSS, CSRF, and injection vulnerabilities through secure coding practices and framework-level safeguards.
- Led the migration from monolithic to microservices architecture for backend, enhancing system scalability and reliability.

Tools and Technologies: React, Gatsby, TypeScript, JavaScript, Node.js, React Query, MongoDB, Postgres, Kubernetes, GCP, Azure DevOps

Genie

Genie offers a platform that enables customers to pay for a variety of transactions such as Bill Payments, Online Shopping, Over-The-Counter and Remote Payments.

Key contributions in the Project:

- Designed and developed a responsive payment application enabling credit card and debit card transactions using Angular 12, NgRx, Bootstrap, and Figma.
- Led the team to implement micro-frontend architecture to build modular sub-applications.
- Built a merchant application for store counters to accept payments via QR codes and other methods.
- Integrated frontend applications with RESTful APIs and Server-Sent Events (SSE) for real-time communication.
- Developed a scalable design system for reusing UI components across multiple projects, adhering to micro-frontend architecture principles.
- Authored modular SCSS following the BEM (Block Element Modifier) convention to ensure consistent styling.
- Collaborated with DevOps to implement CI/CD pipelines and deploy applications across environments.

Tools and technologies: Angular 14, TypeScript, JavaScript, NgRx, SCSS(BEM), Bootstrap 4, Jenkins, Git, Figma
